DEDICATED SERVER HOSTING

nST
IT SOLUTIONS
25 years

Our dedicated server hosting solutions provide a secure haven for your valuable IT assets, safeguarding them effectively. Additionally, we offer a rental option for hardware resources, alleviating the need for substantial capital investment in IT. Our cutting-edge facilities, spread across three states, provide dedicated space to meet your specific requirements. The support servers we offer are top-of-the-line rack mount products from industry leaders like Cisco, Dell, HP, and IBM. In addition to dedicated server hosting, we extend ancillary utilities such as network switching or routing, firewalls, and storage either as a service or by hosting your own equipment alongside our dedicated servers. This flexibility ensures a tailored approach to meet your unique IT needs.

Services Include:

- Expert relocation services
- Project management solutions
- Hardware-as-a-service (HaaS)
- Software-as-a-service (SaaS)
- Backup and recovery services
- Comprehensive disaster recovery solutions
- Managed private network services
- Security measures including firewalls and antivirus protection
- Bandwidth optimisation services

Reasons to Outsource Hosting

Outsourcing hosting enables you to concentrate on propelling your business forward and excelling in your core competencies. By freeing up your staff to focus on strategic initiatives crucial to the business, it becomes a tactical decision. This approach allows you to leverage the latest technology, resulting in cost reduction and enhanced operational efficiency.

Features

We provide customers with the option to house their servers in our dedicated server hosting racks, accommodating both rack-mounted and blade-enclosed servers. NST establishes connections from multiple ISPs into our data centre facilities. Recognising that not all businesses can afford premium data centers, our shared offering delivers cost benefits.

Opting to rent hardware resources involves costs of a non-capital nature, and you won't have to worry about equipment upgrades, as we manage that aspect. The geographical separation between your physical business premises and the secure location of our data center simplifies disaster recovery procedures.

For businesses choosing to have their in-house IT team support the servers, access to our facilities can be arranged for their technical staff. Alternatively, clients can upgrade to a fully managed service, where NST takes care of support, maintenance, and upgrade tasks on their behalf. This flexibility allows businesses to tailor their hosting solution according to their specific needs and preferences.
